

STACK 2018

Government + Industry + Tech Community

STACK is the Government Technology Agency's (GovTech) first conference for developers, programmers and technologists from the public and private sectors.

Held at Suntec Singapore Convention and Exhibition Centre from 2 to 3 October 2018, STACK is a platform for innovators and technophiles to learn about, share knowledge on and try out some of the latest digital products and innovations that the Singapore Government is working on.

One of the strategies outlined in the [Digital Government Blueprint](#) is to foster greater co-creation with citizens and businesses. Towards this end, STACK signifies the commitment of the Singapore Government in **developing the platforms and tools for industry players and developers to co-create solutions**. One example is the Singapore Government Tech Stack (SGTS), a central and scalable platform for government agencies to leverage common digital services, data and infrastructure to build their digital applications. Parts of the SGTS – such as the [MyInfo data APIs](#) – have already been made available for companies to use in their digital services.

More significantly, STACK will highlight the strides taken by the Singapore Government in **fostering a quality DevOps environment** for the design, development and deployment of citizen-centric digital products and services. These include developing more in-house platforms such as HATS (Hive Agile Testing Solution) - a tool that automates testing of digital services on multiple browsers and mobile devices simultaneously – as well as making greater use of commercial cloud.

GovTech has invited top technologists from the private and public sectors to speak at STACK 2018. Confirmed speakers include: Gregor Hohpe (Google Cloud), Steven Murawski (Microsoft), Richard Socher (Salesforce), Danny Burkes (Pivotal), Olivier Klein (Amazon Web Services), Kief Morris (ThoughtWorks), Chang Sau Sheong (SP Group), among others.

GovTech will also be holding talks and technical workshops where participants will get an insight into the Government's technology platforms and products. This is part of the Government's efforts to build capabilities and drive thought leadership in the technology space, in the move towards a Smart Nation.
